

Arctic

Regional Drive

The Hawkinson Arctic tread is the most duplicated retread traction design ever invented. This all-season tread continues to outperform other designs on drive positions.

Special Features

- Used for on/off road, highway, city P&D and school bus applications
- Tread depth ranges from 18/32 to 20/32

Retreading is essential for the environment, there are 300 million tires currently stockpiled, and 281 million tires generated annually. Coupled with the fact it requires 22 gallons of oil to manufacture a new truck tire versus 7 gallons of oil to retread a truck tire, Hawkinson is continuing to **“Go the Extra Mile”** for you and the environment... **one retread at a time!**
