

H96

Long Haul Drive

The Hawkinson H96 has solid shoulder ribs to distribute weight and torque to fight irregular wear. This design is effective for long haul applications and most regional services.

Special Features

- Aggressive, long-mileage tread design
- Self-cleaning grooves
- Effective design for Long Haul
- Tread depth is 24/32

Retreading is essential for the environment, there are 300 million tires currently stockpiled, and 281 million tires generated annually. Coupled with the fact it requires 22 gallons of oil to manufacture a new truck tire versus 7 gallons of oil to retread a truck tire, Hawkinson is continuing to **“Go the Extra Mile”** for you and the environment... **one retread at a time!**
